

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1. (Currently Amended) An environment information server, including one or more hardware elements, the server comprising:

a server controller;

a network connection connected to said server controller;

an environment information database connected to said server controller for storing data for one or more network environments; and

a request handler connected to said server controller for processing user requests received through said network connection,

wherein the environment information server periodically polls the one or more network environments and updates the environment information database with information regarding each of the one or more network environments,

wherein the information regarding each of the one or more environments comprises user count information and latency information measured relative to a sample client, and available services supported by the environment, and

wherein said request handler exchanges data with said environment information database and returns, in response to a received request, an environment report of network environments selectable by the user for connection.

2. (Currently Amended) The environment information server of claim 1, wherein:

the data for an environment stored in said environment information database includes network information for the environment and [[,]] status information for the environment and user count information for the environment.

3. (Original) The environment information server of claim 1, wherein:
said network information indicates a name of the environment.

4. (Original) The environment information server of claim 1, wherein:
said network information indicates a fully qualified domain name of the environment.

5. (Original) The environment information server of claim 1, wherein:
said network information indicates a port number of the environment.

6. (Original) The environment information server of claim 1, wherein:
said status information indicates whether the environment is available or not.

7. (Previously Presented) The environment information server of claim 2,
wherein:

said user count information indicates the current number of clients connected to
the environment.

8. (Previously Presented) The environment information server of claim 2,
wherein:

said user count information indicates the maximum number of clients allowed to
be connected to the environment.

9. (Original) The environment information server of claim 1, wherein:
said environment information also includes description information indicating
information describing the environment.

10. (Original) The environment information server of claim 9, wherein:
said description information indicates news about the environment.

11. (Original) The environment information server of claim 1, wherein:
said environment report provides multi-lingual support.

12. (Original) The environment information server of claim 1, wherein:
said environment information request indicates client information about said
client.

13. (Original) The environment information server of claim 1, wherein:
each environment supports an on-line game.

14. (Original) The environment information server of claim 1, wherein:
said requests are received from game consoles connected to said network
connection through the Internet.

15. (Original) The environment information server of claim 1, wherein:
said network connection is connected to the Internet.

16. (Original) The environment information server of claim 1, wherein:
said request handler generates environment reports using data stored in said
environment information database.

17. (Original) The environment information server of claim 16, wherein:
said request handler customizes environment reports using client information in
received requests.

18. (Currently Amended) A method of providing environment information, comprising:

periodically polling one or more network environments;

updating an environment information database with information regarding each of the one or more network environments,

wherein the information regarding each of the one or more environments comprises user count information and latency information measured relative to a sample client, and available services supported by the environment;

receiving a request from a user;

retrieving environment information for the one or more environments from the environment information database;

generating an environment report according to said retrieved environment information; and

sending, in response to the user request, the environment report of network environments selectable by the user.

19. (Original) The method of claim 18, wherein:

said network information indicates a name of the environment.

20. (Original) The method of claim 18, wherein:

said network information indicates a fully qualified domain name of the environment.

21. (Original) The method of claim 18, wherein:

said network information indicates a port number of the environment.

22. (Original) The method of claim 18, wherein:

said status information indicates whether the environment is available or not.

23. (Currently Amended) The method of claim 18,

wherein environment information for an environment includes network information for the environment and ~~[[,]]~~ status information for the environment, ~~and user count information for the environment,~~ and

wherein said user count information indicates the current number of clients connected to the environment.

24. (Currently Amended) The method of claim 18,

wherein environment information for an environment includes network information for the environment ~~[[,]]~~ and status information for the environment, ~~and user count information for the environment,~~ and

wherein said user count information indicates the maximum number of clients allowed to be connected to the environment.

25. (Original) The method of claim 18, wherein:

said environment information also includes description information indicating information describing the environment.

26. (Original) The method of claim 25, wherein:

said description information indicates news about the environment.

27. (Original) The method of claim 18, wherein:

said environment report provides multi-lingual support.

28. (Original) The method of claim 18, wherein:

said environment information request indicates client information about said client.

29. (Original) The method of claim 28, wherein:

said environment report is customized according to said client information.

30. (Original) The method of claim 18, wherein:

said network connection is connected to the Internet.

31. (Original) The method of claim 18, wherein:

said client is a game console.

32. (Currently Amended) A method of accessing environment information, comprising:

sending an environment information request from a client to an environment information server;

receiving from said environment information server, in response to the environment information request, an environment report of network environments selectable by the client for connection,

wherein the environment information server periodically polls the network environments and updates an environment information database with information regarding each of the network environments,

wherein the information regarding each of the one or more environments comprises user count information and latency information measured relative to a sample client, and available services supported by the environment, and

exchanging data with said environment information database to return to the client, in response to a received request, the environment report of network environments selectable by the client for connection.

33. (Original) The method of claim 32, further comprising:

connecting said client to a data network;

establishing said network connection between said client and said environment information through said data network;

closing said network connection to said environment information server after receiving said environment report.

34. (Original) The method of claim 32, further comprising:

presenting said environment report through said client.

35. (Original) The method of claim 32, further comprising:

selecting an environment according to said environment report.

36. (Original) The method of claim 35, further comprising:

establishing a second network connection to said selected environment.

37. (Original) The method of claim 36, further comprising:

accessing an online game using said selected environment.

38. (Original) The method of claim 32, further comprising:

said environment information request indicates client information about said client.

39. (Original) The method of claim 38, further comprising:

said environment report is customized according to said client information.

40. (Original) The method of claim 32, further comprising:
said network information indicates a name of the environment.

41. (Original) The method of claim 32, further comprising:
said network information indicates a fully qualified domain name of the
environment.

42. (Original) The method of claim 32, further comprising:
said network information indicates a port number of the environment.

43. (Original) The method of claim 32, further comprising:
said status information indicates whether the environment is available or not.

44. (Currently Amended) The method of claim 32,
wherein environment information for an environment includes network
information for the environment~~[[,]]~~ and status information for the environment, ~~and user count~~
~~information for the environment, and~~
wherein said user count information indicates the current number of clients
connected to the environment.

45. (Currently Amended) The method of claim 32,
wherein environment information for an environment includes network
information for the environment~~[[,]]~~ and status information for the environment, and ~~user-count~~
~~information for the environment, and~~
wherein said user count information indicates the maximum number of clients
allowed to be connected to the environment.

46. (Original) The method of claim 32, further comprising:
said environment information also includes description information indicating
information describing the environment.

47. (Original) The method of claim 46, further comprising:
said description information indicates news about the environment.

48. (Original) The method of claim 32, further comprising:
said environment report provides multi-lingual support.

49. (Original) The method of claim 32, further comprising:
said network connection is to the Internet.

50. (Original) The method of claim 32, further comprising:
said client is a game console.

51. (Currently Amended) A computer program, stored on a tangible storage medium, for use in providing environment information, the program comprising executable instructions that cause a computer to:

periodically poll one or more network environments;

update an environment information database with information regarding each of the one or more network environments,

wherein the information regarding each of the one or more environments comprises user count information and latency information measured relative to a sample client, and available services supported by the environment;

process an environment information request from a client;

retrieve environment information for the one or more environments from the environment information database;

generate an environment report according to said retrieved environment information; and

send, in response to the client request, the environment report of network environments selectable by the client.

52. (Currently Amended) A computer program, stored on a tangible storage medium, for use in accessing environment information, the program comprising executable instructions that cause a computer to:

send an environment information request from a client to an environment information server;

receive from said environment information server, in response to the environment information request, an environment report of network environments selectable by the client for connection,

wherein the environment information server periodically polls the network environments and updates an environment information database with information regarding each of the network environments,

wherein the information regarding each of the one or more environments comprises user count information and latency information measured relative to a sample client, and available services supported by the environment, and

wherein the environment information server comprises a request handler that exchanges data with said environment information database and returns, in response to a received request, the environment report of network environments selectable by the user for connection.
